

Weedball

Cost-effective and efficient weed control

An innovative liquid application system for easy and efficient weed control in gardens and round kerbs.

- An efficient and economical method of controlling weeds
- Minimal water requirement
- Ideal for use round path edges
- No risk of spray drift
- Light to carry and easy to use

An economical weed control solution for gardens and general areas

Weedball is a non-spray liquid applicator system designed for targeted herbicide application without affecting surrounding plants. With no overspray to damage your ornamental plants and chemical use reduced by as much as eighty percent, Weedball is an excellent choice for gardens of all shapes and sizes.

Weedball has an impressive list of operator-friendly features. The applicator's ball-shaped head design enables easy and smooth operation. It also features a flat side which has been specifically created to allow easy weed control access along walls and kerbs.

Weedball's clear handle doubles up as a reservoir for herbicides which allows users to easily monitor the liquid level.

In addition, the applicator features an adjustable flow system that releases the desired amount of liquid onto a roller where it is dispensed onto the ball itself. The ball is made of a durable foam compound, which, when flexed with a small amount of pressure, pumps the liquid to the outside surfaces of the ball.

Weedball is particularly suited for use with glyphosate products such as Roundup®. Furthermore, it can also be used with non-toxic chemicals or even vinegar-type solutions.

Specification

Capacity:	828ml
Weight (empty):	0.62kg
Weight (ready to use):	1.45kg
Handle Material:	PVC
