

# InjectorDosPro

Metered-dose injection applicator for invasive weed control

- Sharp robust needle delivers herbicide right to the centre of the stem
- A “dial-in” facility allows to adjust and control the dispensed volume
- No loss of product to the environment
- Liquid supply can be easily shut off using an in-line tap
- A finer second needle included for treating re-growth
- Lightweight design, simple cleaning and maintenance

Specifically designed for eliminating invasive weeds such as Japanese Knotweed, Giant Hogweed and Horsetail, the InjectorDos Pro provides an effective and safe way to treat weeds in places where spray applicators are unsuitable.

## An effective method of invasive weed control

The InjectorDos Pro is an injection applicator with the facility to 'dial-in' a pre-determined metered volume of spray liquid to be dispensed.

Thanks to its non-spray design, no liquid is lost to the environment making it a safe and effective means of treating weeds in places adjoined by sensitive areas (e.g. close to watercourses) or where adjacent foliage needs to be preserved and spray applicators are unsuitable.

Ideal for weeds with hollow stems such as Japanese Knotweed (*Fallopia Japonica*), the applicator is typically used with glyphosate-based herbicide which is injected into the stems. The injection should be administered between the second and third node, generally using a one shot dose of 2ml of undiluted herbicide. The applicator is supplied with a regular needle for initial treatments and a fine needle for treating re-growth.

## User-friendly and safe

Lightweight and easy to use, the InjectorDos Pro comes with a one litre backpack to replenish the applicator via a length of hose. To disconnect the backpack from the applicator, liquid supply is simply shut off using an in-line tap.

The injector features chemical resistant seals for extended product longevity and is simple to clean and maintain.

### Specification

<b>Weight (empty)*:</b>	475g
<b>Weight (full)*:</b>	1475g
<b>Volume per shot:</b>	0.1 - 2ml
<b>Total capacity:</b>	1litre

\* complete with tubing and 1L bottle

## Robust and durable

Specifically designed for repetitive and frequent use by the professional contractor, the InjectorDos Pro features stainless steel framework to provide extra robustness and durability. An ergonomically-shaped handle can help reduce muscle fatigue despite continuous use.

For extended product durability, we also offer the InjectorDos Pro service kit which contains all the seals, springs and valves used inside the applicator. The service kit allows the user to replace the worn parts without the requirement to purchase a new unit.

Left: Untreated Japanese Knotweed (June)  
Right: Treated Japanese Knotweed (following April)
