

Weedstick+

An efficient non-drift weed applicator

Operator's Manual

1. Safety

Always read the label before using any herbicide and follow the safety instructions. The operator must wear suitable protective clothing when using the Weedstick+.

Wear Gloves

Wear Eye Protection

Wear Protective Clothing

Wash hands

Always read the product label before preparing spray mixes. Always adhered to recommended spray dose rates, volume rates and safety precautions.

All pesticides **must** be handled and stored in accordance with the manufacturer's instructions.

All pesticides must be stored in their original containers.

Always Dispose of chemicals in accordance with the manufacturer's instructions.

It is the responsibility of the user to ensure all possible measures are taken to protect the environment.

It is the responsibility of the user to be familiar with, and adhere to, all relevant national and local restrictions, prohibitions and regulations concerning use of pesticides.

2. Filling

The Weedstick+ is recommended for use with Roundup (active ingredient: glyphosate). For best results use a 1:3 (Roundup:water) dilution ratio. For example, to fully fill the tube dilute one part of Roundup (150ml) in two parts of water (300ml). The inlet is located at the top end of the stick. To open it, twist the filler cap anticlockwise. Hold the stick with the sponge pointing downwards and pour the mixed solution into the tube. Ensure you wear suitable protective equipment during mixing and filling. To close the stick, reposition the filler cap and twist it clockwise; the Weedstick+ is now ready to use.

3. Operation

Press the sponge down a few times against the ground surface; this will open the valve inside the sponge so that the liquid can pass into it. Dab each weed for up to two or three times. It is not necessary to apply the liquid to the whole of the weed. For the treatment to be effective, the chemical requires at least 4-6 hours of dry weather. The results should be visible after 7-14 days, depending on weather conditions.

4. Cleaning

Unscrew the sponge from the stick by gently turning it anticlockwise (with the sponge pointing upwards) and wash it in a bucket of water. Ensure you wear suitable protective equipment. For best results, squeeze the sponge a few times and rinse it again. Never clean the sponge under running water!

Store the residue in a suitable container and use it for the next treatment. Label the container and place it in a safe place.
