

WeedWiper

A versatile and efficient non-drip weed wiper

Weedwiper is an innovative non-drip weed wiper for treating weeds in susceptible crops. Thanks to its unique design, it eliminates the risk of spray dripping, thus protecting the valuable crop or plants below.

Highly versatile, Weedwiper is suitable for use in grassland, arable, marshland, conservation areas and close to waterways.

- Environmentally safe due to its unique non-drip design
- Economical use of herbicides thanks to built-in sensor technology
- Efficient automatic control of herbicide flow to the pad
- Supplied with pad covers for enhanced safety
- Can be tractor or trailer mounted

A new generation weed wiper

Weedwiper is a safe and cost-effective method of eliminating weeds in susceptible crops and grassland. It applies herbicides through direct contact with weeds exploiting the height difference between weed targets and the plants below. Weedwiper delivers non-drip brush contact with weed foliage via herbicide moistened pads. Weedwiper's sensor control eliminates risk of dripping thus preventing herbicide wastage and undesired damage of understorey plants.

Safe, efficient and cost-effective

The secret of successful weed management at minimal cost with a wiper is reliable and accurate control of pad wetness. Weedwiper's Hydrostat electronic control system regulates the amount of herbicide transferred to weed plants by switching the pump on and off in response to changes in the amount of herbicide in the pad. The pad is continually saturated for maximum effective transfer of herbicide to weed foliage but never over-saturated to cause dripping, irrespective of travel speed or weed density.

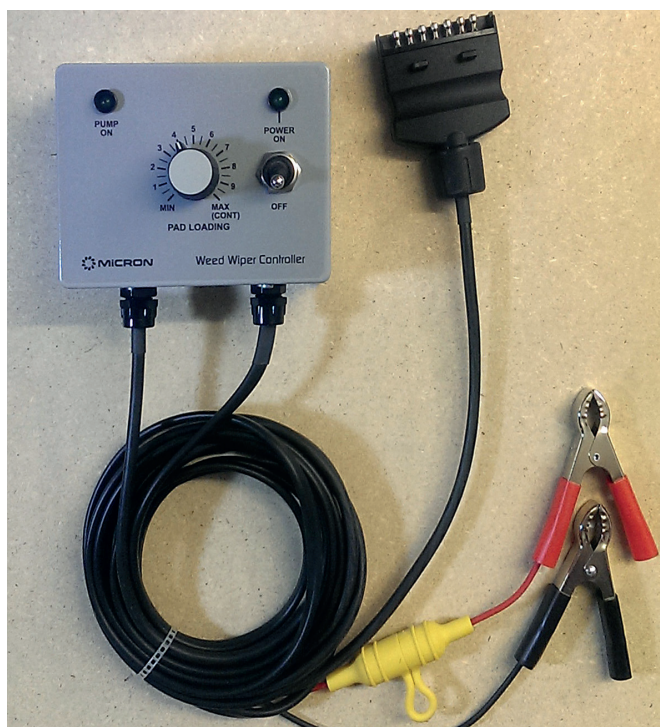

Intelligent pad design

Produced from a strong and tufted 'state of the art' material with premium fluid retention properties, the 150mm (6 inch) deep pads provide a three-dimensional reservoir of active ingredient and offer a large herbicide transfer area to ensure each target weed receives a sufficiently high dose of active ingredient on contact with the pad.

Weedwiper's pad height can be adjusted to suit different terrains and target weed heights. All units are supplied with pad covers to prevent accidental contamination and to safeguard operator safety.

Versatile and durable

Weedwiper works off a 12 volt power supply and can be tractor or trailer mounted. Units have a simple boom end break-back return system and are available in 6, 3 and 2 metre foldable options to enable operation at narrower widths.

Specification

Power Requirement:	12 volts (vehicle battery)
Vehicle Mounting:	3 point linkage, CAT1/2
Trailer Option:	Converts to a tractor mounted unit in a matter of minutes
Folding & Working Widths	
2 Metre Unit:	1.08m, 1.54m & 2m
3 Metre Unit:	1.10m, 2.05m & 3m
6 Metre Unit:	2.45m, 4.22m & 6m
